

RB Farquhar

case study

Sector type: Construction

Project: Western General Hospital

Client need:

The Western General Hospital needed additional temporary office accommodation on its campus and wanted a two storey, linked and stacked temporary building. The client had very specific requirements of quality and layout. Building Control regulations also presented a number of challenges.

Our solution:

We worked closely with the client in the months before delivery to meet their requirements of sixteen stacked and linked units. We sourced and ordered customised staircases to satisfy Building Control Regulations and seamlessly accommodated a change of client during the contract.

Result:

The temporary office units remained at the Western General over a two year hire period.
